Judge orders 1,000 Voice of America staffers back to work in rebuke to Kari Lake

World | **NPR News**

A federal judge has ordered more than a thousand Voice of America staffers back to work by Monday. It's a major defeat for the Trump administration's effort to cut the news outlet to the bones. (Image credit: SAUL LOEB/AFP via Getty Images)

Apple can delist apps "with or without cause," judge says in loss for Musi app

Technology | **Ars Technica**

Musi, a free music streaming app that had tens of millions of iPhone downloads and garnered plenty of controversy over its method of acquiring music, has lost an attempt to get back on Apple's App Store.

A federal judge dismissed Musi's lawsuit against Apple with prejudice and sanctioned Musi's lawyers for "mak[ing] up facts to fill the perceived gaps in Musi's case." Musi built a streaming service without striking its own deals with copyright holders.

It did so by playing music from YouTube, writing in its 2024 lawsuit against Apple that "the Musi app plays or displays content based on the user's own interactions with YouTube and enhances the user experience via Musi's proprietary technology." Musi's app displayed its own ads but let users remove them for a one-time fee of $5.99.

AI Flaws in Amazon Bedrock, LangSmith, and SGLang Enable Data Exfiltration and RCE

Security | **The Hacker News**

Cybersecurity researchers have disclosed details of a new method for exfiltrating sensitive data from artificial intelligence (AI) code execution environments using domain name system (DNS) queries. In a report published Monday, BeyondTrust revealed that Amazon Bedrock AgentCore Code Interpreter's sandbox mode permits outbound DNS queries that an attacker can exploit to enable interactive shells

Iran-Backed Hackers Claim Wiper Attack on Medtech Firm Stryker

Security | **Krebs on Security**

A hacktivist group with links to Iran's intelligence agencies is claiming responsibility for a data-wiping attack against Stryker , a global medical technology company based in Michigan. News reports out of Ireland, Stryker's largest hub outside of the United States, said the company sent home more than 5,000 workers there today.

Meanwhile, a voicemail message at Stryker's main U.S. headquarters says the company is currently experiencing a building emergency. Based in Kalamazoo, Michigan, Stryker [NYSE:SYK] is a medical and surgical equipment maker that reported $25 billion in global sales last year. In a lengthy statement posted to Telegram, a hacktivist group known as Handala (a.k.a.

Handala Hack Team) claimed that Stryker's offices in 79 countries have been forced to shut down after the group erased data from more than 200,000 systems, servers and mobile devices. A manifesto posted by the Iran-backed hacktivist group Handala, claiming a mass data-wiping attack against medical technology maker Stryker.

South Korean Police Accidentally Post Cryptocurrency Wallet Password

Security | **Schneier on Security**

An expensive mistake : Someone jumped at the opportunity to steal $4.4 million in crypto assets after South Korea's National Tax Service exposed publicly the mnemonic recovery phrase of a seized cryptocurrency wallet.

The funds were stored in a Ledger cold wallet seized in law enforcement raids at 124 high-value tax evaders that resulted in confiscating digital assets worth 8.1 billion won (currently approximately $5.6 million). When announcing the success of the operation, the agency released photos of a Ledger device, a popular hardware wallet for crypto storage and management.

However, the images also showed a handwritten note of the wallet recovery phrase, which serves as the master key that allows restoring the assets to another device. The authorities failed to redact that info, allowing anyone to transfer into their account the assets in the cold wallet.

Design for Amiability: Lessons from Vienna

Web Development | **A List Apart**

Today's web is not always an amiable place. Sites greet you with a popover that demands assent to their cookie policy, and leave you with Taboola ads

promising "One Weird Trick!" to cure your ailments. Social media sites are tuned for engagement, and few things are more engaging than a fight. Today it seems that people want to quarrel; I have seen flame wars among birders.

These tensions are often at odds with a site's goals. If we are providing support and advice to customers, we don't want those customers to wrangle with each other. That story has interesting implications for web environments that promote amiable interaction among disparate, difficult (and sometimes disagreeable) people.

The Vienna Circle Though people had been thinking about calculating engines and thinking machines from antiquity, Computing really got going in Depression-era Vienna. The people who worked out the theory had no interest in building machines; they wanted to puzzle out the limits of reason in the absence of divine authority.
